Dassault Systemes CATIA V5-6R2012 SP3 Update (x32/x64) | 864 MB & 953 MB

3D Models created in CATIA V6R2012X can be sent to V5-6R2012, retaining their core features. These features can be modified directly in V5. A design can now evolve iteratively, with engineers having the freedom to create and modify the part at the feature level, whether they use CATIA V5 or V6. With this enhancement, the compatibility between 3D models in CATIA V5 and in CATIA V6 now exceeds that between two releases of V5.

Supporting the transition from CATIA V5 to Version 6 is a priority for Dassault Systemes. Many of our customers want to upgrade to Version 6, but need to continue to work collaboratively, internally or externally, with teams who still use V5. With V6R2012X we introduce an amazing enhanced compatibility between CATIA versions, which makes feature-level collaboration a reality for mixed teams. Moving to CATIA Version 6 has never been easier.

- Investment Protection

We aim to protect the investment our customers have made in CATIA V5, while making it easier for them to take advantage of the open CATIA Version6 at their own pace. Now it is easy to transition to CATIA Version6, while continuing to collaborate seamlessly with internal departments, customers and suppliers who use V5.

- Feature-level Compatibility

3D Models created in CATIA Version 6 can now be sent to V5, retaining their core features. These features can be accessed and modified directly in V5. A design can now evolve iteratively, with engineers having the freedom to create and modify the part at the feature level, whether they use CATIA V5 or

gaining the freedom to create and modify the part at the feature level, whether they use CATIA V5 or Version6. All features in Part Design, Generative Surface Design and Sketcher, related to 3D parametric geometry creation are preserved, as are assembly structures and positional matrices.

- Version 6 Technology

With this enhancement, the compatibility between 3D models in CATIA V5 and in CATIA Version6 now exceeds that between 2 releases of V5. It creates a new collaborative potential between mixed teams. This is made possible by bringing select Version 6 developments to V5, and illustrates the DS commitment to supporting our customers.

- Synchronization of CATIA Version 6 and 5

This ability to edit Version 6 models within V5 will be available starting with V6R2012x and the upcoming release of V5, now called V5-6R2012. The renaming of future V5 releases emphasizes the compatibility and synchronization between V5 and Version 6, as well as the ongoing enrichment of V5 solutions with select Version 6 technology.

About Dassault Systemes

Dassault Systemes, the 3D Experience Company, provides business and people with virtual universes to imagine sustainable innovations. Its world-leading 3D design software, 3D Digital Mock-Up and Product Lifecycle Management (PLM) solutions transform the way products are designed, produced, and supported.

Dassault Systemes' collaborative solutions foster social innovation, expanding possibilities for the virtual world to improve the real world. The group brings value to over 150,000 customers of all sizes, in all industries around the globe.
